Here, we use industry-vetted data on key input parameters, including cost of raw materials, energy, labor, equipment, and construction to develop detailed process-based cost models for ...

In a major move, the U.S. Commerce Department announces preliminary anti-dumping duties of 93.5% on imports of Chinese ...

America is restarting its graphite mines after decades. Demand for this key battery material is soaring, driven by electric cars and electronics. Companies like Titan Mining in New ...

preliminary anti-dumping (AD) tariffs of 93.5% on imports of active anode-grade graphite from China. This material is foundational to lithium-ion batteries.

In a major move, the U.S. Commerce Department announces preliminary anti-dumping duties of 93.5% on imports of Chinese graphite--a key input for electric vehicles (EV) ...

After nearly seventy years of inactivity, US graphite mining is showing signs of revival. Once considered obsolete due to cheap imports, particularly from China, the domestic ...

The U.S. Commerce Department is preparing to impose a significant new tariff on Chinese graphite imports, particularly those used in electric vehicle (EV) battery production.

Demand for graphite, a key material in the lithium-ion batteries that power everything from phones to electric cars, is surging as trade tensions with China persist.

Imagine a world without lithium-ion batteries--no smartphones, no electric vehicles, and no grid-scale energy
