Which networks are covered by the Finnish Communications Act?

The Act covers all communications networks, such as 5G networks, undersea cables and future communications networks. Operators are responsible for security, and the Finnish Transport and Communications Agency Traficom supervises compliance with the Act.

Is Finland a leader in developing secure communications networks?

In Finland, public authorities and the private sector cooperate closely in developing secure communications networks. "By investing in the development of secure 6G networks now, we are showing that Finland continues to be a leader in developing communications networks," Minister Ranne says.

What if Finland uses foreign intelligence equipment?

The use of the equipment could endanger national security or national defence so that the use would enable foreign intelligence activities or activities that would disrupt, paralyse or otherwise adversely affect the important interests, basic functions of society or democratic order of Finland.

The demonstration involved maintaining a continuous and secure 5G data connection across three different national networks. This capability is vital for modern defence ...

In dedicated networks, the role of an individual base station as part of the network may differ significantly from public communications networks. Traficom's assessment is that due to the ...
