-----  
What is Mongolia's power system?

Although the Mongolian power system consists of five interconnected but mostly separate grid network, the Central Energy System (CES) is the largest and most complex system among them.

How many power stations are there in Mongolia?

Coal-fired power stations are the dominant type of electricity generation in Mongolia and may also supply heat. There are 7 currently active power stations. In 2018, 7% of Mongolia's electricity came from renewable power sources, mainly wind power.

How much electricity does Mongolia use?

In 2019, the total electricity consumption of Mongolia has reached almost 9 TWh (terawatt-hours). 81% of which was supplied by domestic generation sources and 19% of which was provided by power imports. The Mongolian power grid consists of five systems (Figure 1).

Why are there different communication networks in Mongolia?

These are: The reason for using these different communication network options is because of the remote locations of substations in Mongolia. In addition, the lack of independent communication networks or infrastructure for the power system controlled by the SCADA system still presents a problem for the Mongolian energy sector.

We use many to refer to a large number of something countable. We most commonly use it in questions and in negative sentences: ...
