Why do I need an inverter for a microgrid?

The inverter provides the MicroGrid with as much PV energy as possible. If the load is less than the maximum capacity of the PV generator and if the batteries are already full (or the charging power of the inverter charger is too low), automatic PV power reduction will be required.

Which inverter charger should I use for the microgrid & backup system?

The system is particularly flexible and can optimally adapt the interaction between the photovoltaic system and the inverter charger to the MicroGrid system. The Fronius SnapINverters are the first choice for the MicroGrid & backup system. Depending on the system size, you can use either a Fronius Symo or a Fronius Eco.

What is a microgrid generator?

MicroGrids are often formed in regions with an insufficient power supply. MicroGrids either function completely without grid connection as a regional, self-contained grid or serve as a grid-connected backup system. Diesel generators are often used to maintain the energy supply.

What is a microinverter solar panel?

Microinverters, or micros, are very small solar inverters attached directly to individual solar panels. Since each microinverter and panel operate independently, they are an excellent option for complex roof layouts and locations with shading.

With IQ Microinverters, each solar panel operates independently while central inverter systems limit their production to the weakest module. If shadows or clouds pass overhead, IQ ...
