What are SN series Inverters?

SN series inverters are string PV inverters without transformers. They are used to convert the DC energy of PV panels into AC electrical energy, which can be delivered to the power grid directly or through grid-connected transformers. The following figure shows the schematic diagram of the PV power generation system.

What to do if a Sineng inverter fails?

If the fault persists, contact Sineng After-sales Service Center. Wait for the inverter to resume normal operation. If the fault occurs repeatedly, check as follows: Humid environment or poor lighting of the PV panel may cause this fault. Generally, the inverter will be reconnected to the power grid after the environment improves.

How to store a Sineng inverter?

The inverters must be stored indoors, and the package of the inverters must be intact. It is strictly prohibited to store the inverters without packaging. Otherwise, Sineng shall not assume any liability for the damage to the inverters, the shortening in service life or other losses caused by such storage conditions.

Are inverters safe?

The inverter is a power electronic product and has potential risks, especially after it is powered on. It must be operated by professional personnel with safety protection measures taken. When the inverter is running, the surface (especially the radiator part) has a high temperature.

The inverter is blessed by new technology to achieve a rated output power of 250kW and a maximum output power of 275kW, which is the highest power level in the industry.

On December 22, 2025, Shangneng Electric Co., Ltd. and Saudi PIF officially signed a supply agreement for

4GW photovoltaic inverters for the sixth phase of photovoltaic power plants, ...

With built-in support for hydrogen fuel cell integration and virtual power plant (VPP) participation, this inverter positions businesses for emerging energy markets.

Unpack the inverter according to the steps in Figure 2-1, and place the inverter on a flat place to prevent the inverter from toppling and prevent the radiator from collision.

After completion and operation, it will add annual production capacity of 15GW of distributed photovoltaic inverters and 10GW of large string photovoltaic inverters.

The inverter is composed of semiconductor power devices and control circuits. At present, with the development of microelectronics technology and global energy storage, the emergence of ...

Discover how this high-capacity inverter bridges the gap between renewable energy adoption and industrial power demands.

The project will adopt Shangneng Electric's 8.8MW centralized inverter and boost integrated machine, which has a larger network array capacity and can quickly respond to power grid ...

In today's energy-intensive industries, the Shangneng 50kW inverter stands out as a game-changer. Designed for commercial solar farms and industrial facilities, this three-phase power ...

On the other hand, with an upgraded power drive control algorithm, the product effectively reduces auxiliary power consumption during operation, significantly enhancing long ...

The project will adopt Shangneng Electric's 8.8MW centralized inverter and boost integrated machine, which has a larger network array capacity and ...
