What is a 5G base station?

A 5G Base Station is known as a gNode B (next 'generation' Node B). This is in contrast to a 4G Base Station which is known as an eNode B ('evolved' Node B), and a 3G Base Station which is known as a Node B. Figure 21 illustrates two Standalone (SA) Base Station architectures, known as 'option 2' and 'option 5'.

Can NSA base stations evolve from 4G to 5G?

NSA Base Stations can provide an evolution path from 4G to 5G. Figure 22 illustrates two configurations for Non-Standalone Base Stations using the 4G Core Network. These configurations, known as 'option 3' and 'option 3a', can be deployed before introducing the 5G Core Network.

What is a communication base station?

In the vast telecommunications network, communication base stations play a frontline role. Positioned closest to end users, they serve as gateways for processing customer requests and managing data flow. In the words of 'Interesting Communication Engineering Drawings,' these stations act like "business trackers," always vigilant to:

How to evaluate a 5G energy-optimised network?

To properly examine an energy-optimised network, it is very crucial to select the most suitable EE metric for 5G networks. EE is the ratio of transmitted bits for every joule of energy expended. Therefore, while measuring it, different perspectives need to be considered such as from the network or user's point of view.
